¹Tracking features require cameras with bi-directional feedback and extended protocol support (eg. Pelco D Protocol Extended) to allow absolute positioning and positional queries. "Slew to cue" tracking of roaming objects has the same requirements. "Slew to cue" of cameras to static targets (eg cabinet intrusion) may be accomplished using predefined presets and does not require Cameleon Tactical, feedback or extended protocol sets.

²IP models do not support tracking at this time when using IP communications (i.e. Spectra IV IP & HD).
