Command and Control Solutions

Sophisticated Alarm Management

Automate actions in response to an alarm. Broadcast notification to specified operators, or notify them in turn to guarantee timely handling. Archive alarms for later retrieval.

Customize Site Maps

Customize site maps with icons representing installed devices, alarms and automated events. Create hyperlinks to additional maps and named views. Or use the device list instead.

Control External Displays

Display video on external monitors and video walls with simple drag-and-drop actions. Cameleon's integration with video walls allows content and layout to be customized from the client interface.

Operator Security

Secure system access through operator passwords and access privileges. Granular permissions restrict an operator's access to each site map and device independently, as well as restricting access to a subset of a device's features.

Priorities

Built-in arbitration system eliminates CCTV resource conflicts and allows operators to take control of specific devices.

Advanced Automation

Powerful scripting language can automate common tasks and ensure the correct conditions exist before a particular action takes place. Design scripts to perform tasks in response to user control, conditions within the system, access or alarm input, or according to a schedule.

Scalability

Scale up by adding servers and clients as needed. Cameleon supports client-multiple server and server-to-server architecture. Share video with other users while protecting sensitive parts of your system configuration.

Hybrid IP/Analog Video

View and control IP and analog video simultaneously through a single interface. Cameleon's state-of-the-art canvas technology allows you to migrate from your existing analog video system into the era of IP video gradually, without losing your investment.

Multi-Vendor Support

Combine equipment from different manufacturers. Use Cameleon's intuitive interface to configure and control them all. Seamlessly integrate legacy equipment with new equipment.

Custom Windows

Multi-purpose custom windows allow you to view live and archived video, load site maps, control remote PCs, or connect to the Internet.

Customize Desktop

Customize the appearance of operator workstations. Specify which windows are displayed, and their size, position and content on individual or multiple workstations. Multiple monitor configurations are fully supported.

Integrated Security System

Link external access control and alarm systems to Cameleon to create an integrated security system.

Restrict Viewing

Restrict certain operators, or groups of operators, from viewing video from particular cameras or on specific monitors. Easily reverse restrictions at any time.

Device Controls

Device gadgets give operators easy access to a device's advanced controls, camera presets, patterns and auxiliaries.

Fluid PTZ Control

Custom windows are live control pads. View video using intuitive drag-and-drop actions. Simple mouse controls pan and tilt the camera, or zoom, focus or adjust the iris.

Archived Video

Archive video on network video recorders or DVRs. Use the same interface to retrieve archived video, from any recording device.

Camera Association

Automatically load the archived video associated with an alarm, without having to search and cue the video manually.
